

EARTH DAY

AT HCC 2021

A Day of Action: Growing Gardens and Building Birdhouses

Madagascar Day Gecko

- The Madagascar day gecko, an island pollinator, is easily noticeable due to their bright lime green body which features red spots across the back and a red stripe between the eye and nose.
- They can change their color slightly based on their mood or if they are ill.
- Madagascar day geckos are likely to be important pollinators of Malagasy plant species that produce enough nectar to attract them, and plants with colored nectar and secondary metabolites may have evolved those traits to attract the geckos.

04.21.2021 - 04.22.2021

From 11am -3pm.

Taking place in the courtyard at HCC.
